

Sector	South Coast Rock Lobster Medium Term Right Holders				
Description of rule types					
Mean	average; approximating the statistical norm or average or expected value an average of n numbers computed by adding some function of the numbers and dividing by some function of n If the applicant's response could not be calculated, the applicant's response is excluded in the calculation				
Percent rank breakdown	Uses the Oracle database analytic syntax of the 'Percent_Rank()' function to calculate the percentage ranking of a value relative to its group PERCENT_RANK calculates, for a hypothetical row R identified by the arguments of the function and a corresponding sort specification, the rank of row R minus 1 divided by the number of rows in the aggregate group. For a row R, PERCENT_RANK calculates the rank of R minus 1, divided by 1 less than the number of rows being evaluated (the entire query result set or a partition). Formula: (rank of row in its set - 1) / (number of rows in the set - 1) The range of values returned by PERCENT_RANK is 0 to 1, inclusive. The first row in any set has a PERCENT_RANK of 0. http://www.devshed.com/c/a/Oracle/Large-Database-Features-In-Oracle-conclusion/4/ http://manuals.it.swin.edu.au/oracle8.1.6/server.816/a76989/func168.htm				
Utrap system specific functionality	Takes the output of the Oracle Percent_Rank function and multiplies by 100. If an applicant falls on the boundary of a percent rank, the applicant is moved to the above rank If the applicant's response could not be calculated, the applicant is excluded in the calculation
